10 Title: METHOD AND DEVICE FOR WIRELESS DATA TRANSMISSION  
AND STORAGE

To: Commissioner for Patents

P.O. BOX 1450

15 Alexandria, VA 22313-1450

Subject: Information disclosure statement under 37  
CFR §1.56

20

Dear Sir,

This is an Information Disclosure Statement in  
accordance with the duty to disclose information  
25 material to patentability under 37 CFR §1.56. The  
applicants wish to make of record the documents listed  
on the accompanying form PTO/SB/08.

Since this IDS is filed before the mailing date of the  
30 first Office action, consideration of the information  
disclosure statement is hereby requested according to 37 CFR  
§1.97(b).

That each item of information contained in the information disclosure statement was first cited in an Office communication mailed on June 9, 2006 for the counterpart China patent application number 031277284, which are more than three months from the filing of the information disclosure statement. Accordingly, the fee of submission of an information disclosure statement set forth in § 1.17(p) is enclosed to fulfill § 1.97 requirement.

10 The first cited document (JP 2002-91495A, Published March 27, 2002) discloses: 1. PROBLEM TO BE SOLVED: To improve tone quality, to record data for a long time and to improve operability by setting different coding process systems in the case in which a recording medium within the recorder is used and the case in which an external equipment is used as a recording medium; and 2. SOLUTION: A digital recorder 1 which is an audio recorder of this invention, is constituted of a digital signal processing section (DSP) 13 which is capable of coding inputted audio signals using at least two systems, a system control section (CPU) 11 which is a data recording means and records coded audio data onto a recording medium (a flash memory) 12 and a data transmitting and receiving circuit which transfers the coded audio data to external equipment (for example, a personal computer) through wireless communication. The CPU 11 sets a coding system which is used to transfer the audio data to the external equipment and control the equipment so as to record the data.

30 The second cited document (CN 1398112A, Published February 19, 2003) provides a digital camera with wired/wireless interconnection between a compression unit and a portable recording unit. The digital camera comprises: an image

capturing processing compression display unit; a portable recording playback unit; a bi-directional transmission unit for coupling the image capturing processing compression display unit mentioned above and the portable recording playback unit mentioned above with wired/wireless interconnection. The image capturing processing compression display unit and the portable recording playback unit are individually assembled parts, and perform bi-directional transmission with each other through wired/wireless interconnection. The image capturing processing compression display unit is compact, so as to be held in a user's hand for capturing image and recording audio information. The portable recording playback unit can be put on the user's shoulder or hung at the waist, or put anywhere nearby. The compressed digital audio and video information can be recorded on a standard optical disc, so the data storage amount thereof is great.

According to the requirement set forth in 37 CFR §1.98, 20 a copy of each cited reference and its English language abstract is included to fulfill the concise explanation requirement.

It is respectfully requested that the examiner can 25 consider the documents listed on the accompanying form PTO/SB/08 and that it be made of record in the application. The applicants sincerely hope that the examiner initials the cited references on the form and that a copy of the initialed form be sent to the applicants with the next communication 30 from the examiner.

Respectfully submitted,

*Winston Hsu*
